

## Product Details Portal Algorithm

In the given code created a servlet based web application that shows a form to enter product details. In this I have designed a form for adding products into the system entered by the users.

And the product is just captured & displayed without storing it anywhere. To develop this project the following are used.

- 1) Maven to create a web enabled maven project
- 2) Apache tomcat as the web server
- 3) JSP for the front End
- 4) servlets for backend processing
